<https://pillow.readthedocs.io/en/3.4.x/> #not used but it is in our code

We used Django cleanup and Allauth in our project. Pillow was going to be used for profile images, but we were unable to use them but we still have the code for the models and the design.

Django Cleanup deletes files once we delete the models associated with them and Allauth handles user authentication.

Our Frontend used Material design and we obtained code from and based on the documentation
