

Jordy Guntur, Grade: A+

When we first started off the project, as seen on the progress reports, I did much of the work for the project. I was worried because no one contributed because Python and Django and even front-end things were a complete anomaly to my group members. Understandable since this is the first web development course for them.

It's difficult to say who did what specifically but after I was out of commission for a week, Vasim stepped up and worked hard to get all the back-end functionality to work. Nearing the end, Vasim worked with the models and forms and views to get things to work but did not understand front-end. It worked out well, he was doing the back-end and I was working on mainly the front-end. We worked well as a team.

Maria did not do much. We asked Maria to do the message board functionality but she was unable to finish and Vasim and I had to work on that.

Vasim Patel, Grade: A+

As stated before, Vasim put in a lot of work and stressed a lot about this project. We both put in a lot of late nights and long hours to get this site working the way we wanted to. Looking back, we would have preferred to use a different language but we could not switch.

Vasim did a lot of work. He was waist deep in almost every Django form and view and models. Admittedly most of the things we did were repetitive but it works. I believe Vasim deserves the same grade or higher as I. The amount of work he put in is tremendous.

Maria Weber, Grade: C

I honestly do not know what happened here. Maria was trying to learn Django early in the game but then fell off. She stopped inquiring about the project, stopped meeting and kind of just shut down. She did not contribute to the project. Maria is our friend, so we don't have any problems with her. We believe she's having a rough semester but she hasn't informed us of anything.

If anything, this entire project was a two person team of Vasim and I. If you take into account that I didn't do anything for 1-2 weeks, this project was a 1.75 person team.
